

Managed Software Center (Not the APP Store!)

The Technology Department will deploy additional software and updates through Managed Software Center.

Managed Software Center updates can be done anytime the computer is connected to the Internet, both school and home.

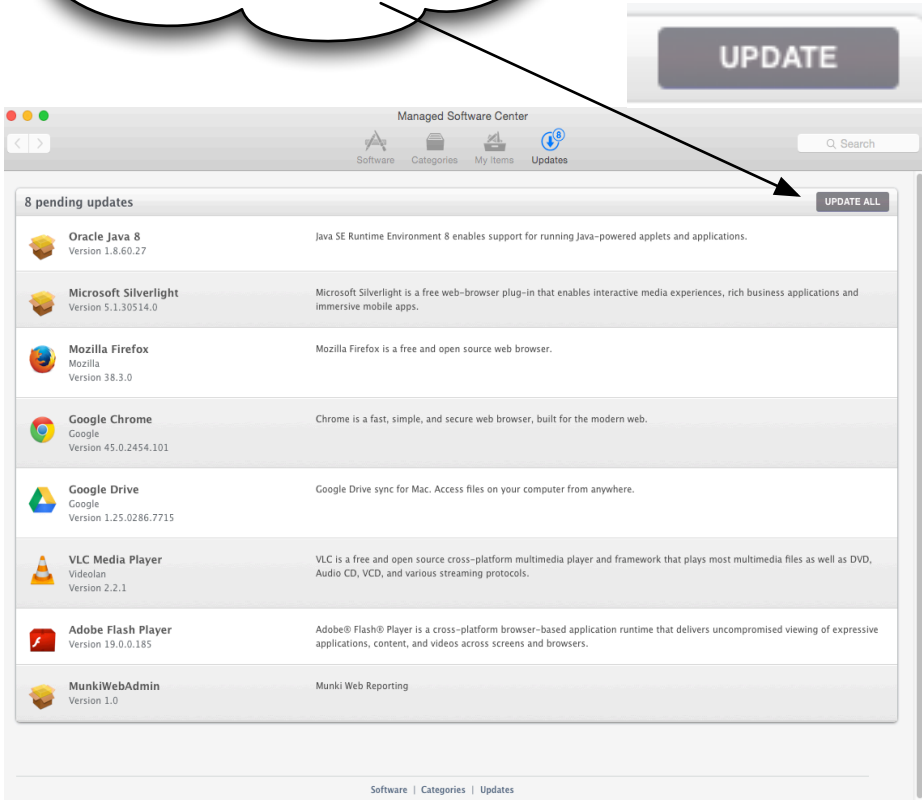

In order for you to get software updates you will need to open Managed Software Center and follow the directions in this document.

Managed Software Center is an Application found in your Applications folder. You can access your Applications folder by clicking on the Finder (Happy Mac) icon on the left side of your dock. Then click on Applications, scroll, and double click on the Managed Software Center icon.

If your computer needs any updates they will be listed here. Click on Update or Update All to start the update process.

If your computer is up to date you will see this.

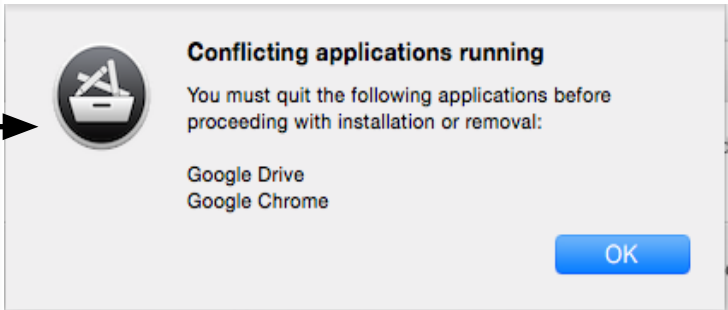

No pending updates

A KEY POINT
 Your computer cannot update any application that is currently open.

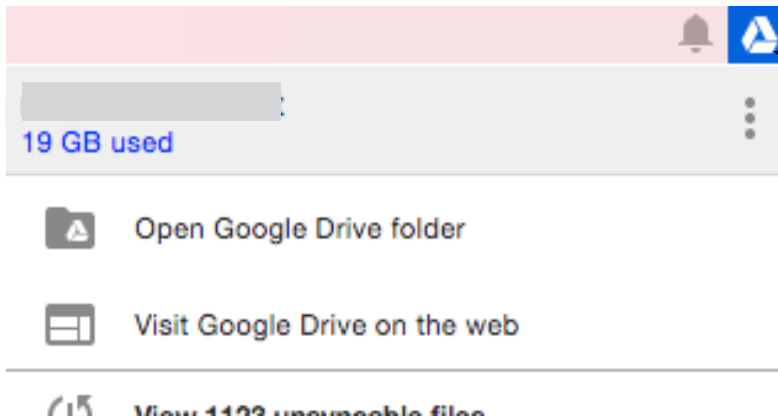

You will see a dialogue window similar to this if you have open applications that need updating. Please QUIT any open applications and initiate the update process again after the applications are closed.

Quitting Google Drive can be a little tricky, please see page 3 for details on how to make that happen.

How to "Quit" Google Drive

After launching **Managed Software Center** from your **Applications Folder** and clicking **Update**, IF you need an update for **Google Drive** you will need to QUIT Google Drive then run the update.

Click the Google Drive Syncing icon on your top menu bar

Then click the 3 Dots.
Yea we know, could they hide it more?
Then Click Quit Google Drive

After you have done this, go back to **Managed Software Center - Updates** and run your updates. Please remember that updates can only be run if the application it is updating is not open. **You may have to Quit other open applications.** After the update is complete, don't forget to go back to the applications folder and double click on Google Drive to start the application running again and get your syncing going again.

In your Applications Folder
